2020 CERTIFICATION**Consumer Confidence Report (CCR)****Black Jack Water Association***Public Water System Name*

0530002

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR.

CCR DISTRIBUTION (Check all boxes that apply.)

INDIRECT DELIVERY METHODS (Attach copy of publication, water bill or other)	DATE ISSUED
<input checked="" type="checkbox"/> Advertisement in local paper (Attach copy of advertisement)	5/30/2021
<input checked="" type="checkbox"/> On water bills (Attach copy of bill)	6/14/2021
<input type="checkbox"/> Email message (Email the message to the address below)	
<input type="checkbox"/> Other _____	
DIRECT DELIVERY METHOD (Attach copy of publication, water bill or other)	DATE ISSUED
<input type="checkbox"/> Distributed via U. S. Postal Mail	
<input type="checkbox"/> Distributed via E-Mail as a URL (Provide Direct URL): _____	
<input type="checkbox"/> Distributed via E-Mail as an attachment	
<input type="checkbox"/> Distributed via E-Mail as text within the body of email message	
<input type="checkbox"/> Published in local newspaper (attach copy of published CCR or proof of publication)	
<input type="checkbox"/> Posted in public places (attach list of locations)	
<input type="checkbox"/> Posted online at the following address (Provide Direct URL): _____	

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the MSDH, Bureau of Public Water Supply.

CCR DEADLINE TO MSDH & CUSTOMERS: BY JULY 1, 2021

Annual Drinking Water Quality Report
Black Jack Water Association
PWS ID # 0530002
April 2021

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source consists of 2 wells that draw from the Gordo Aquifer.

A source water assessment has been completed for the water supply to determine the overall susceptibility of its drinking water to identify potential sources of contamination. The water supply for Black Jack Water Association received a lower susceptibility ranking to contamination.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Theodis Weaver at 662-769-1780. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the 1st Monday of each month at Black Jack MB Church at 6:00 pm.

Black Jack Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2020. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2019*	0.0619	No Range	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	11 18 to 12 31 20	0.3	None	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives.
16. Fluoride	N	2019*	0.141	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	11 18 to 12 31 20	1	None	ppb	0	AL=15	Corrosion of household plumbing systems. erosion of natural deposits
Disinfectants & Disinfectant By-Products								
Chlorine (as Cl ₂)	N	11 20 to 12 31 20	1.10	0.60 to 1.30	ppm	4	4	Water additive used to control microbes

* Most recent sample results available

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

This report is being published in the paper and will not be mailed. Please call our office if you have any questions.

Roberts' Reviews

Writer & director Zack

Snyder is no stranger to zombie zags. He made his cinematic directorial debut in 2004 with his inspired remake of George A. Romero's 1978 classic "Dawn of the Dead," starring Ving Rhames, Sarah Polley, and Jake Weber. Afterward, he staged his suspenseful Spartan saga "300" (2006) with Gerard Butler, and then his magnum opus "Watchmen" (2009), with Jeffrey Dean Morgan, Malin Akerman, and Patrick Wilson. Snyder followed up this seminal classic with his bizarre, animated adventure "Legend of the Guardians: The Owls of Ga'Hoole" (2010), not exactly kid stuff, before he ventured farther out on a limb with a sinister shoot'em up "Sucker Punch" (2011), featuring Emily Browning, Abbie Cornish, Jena Malone, and Vanessa Hudgens. Of course, Snyder reinvented the immortal DC Comics' characters Superman and Batman in "Man of Steel" (2013), toplining Henry Cavill as the eponymous hero, and then in his notorious "Batman v Superman: Dawn of Justice" to finish, this two-hour &

VAN ROBERTS
Film Columnist

(2016), launching Ben Affleck as the Caped Crusader, with Henry Cavill reprising his Superman role. After private tragedies forced him to withdraw from "Justice League" (2017), Marvel guru Joss Whedon finished it. Later this summer after its debut on HBO/MAX, "Zack Snyder's extended cut of Justice League" (2021) will appear on home video. Seventy-one percent of Rotten Tomatoes critics have given it positive reviews, while ninety-four percent of audiences have loved it.

Coming full circle, Snyder has returned to his roots with Netflix's "Army of the Dead," starring David Bautista. Formulaic from start to finish, this two-hour &

twenty-minute zombie melodrama/ heist film is sure to assuage the cravings of bloodthirsty zombie fans. Basically, "Army of the Dead" is zombie porn about the undead munch-athon. Not surprisingly, bare-breasted zombie strippers feast on an ill-fated tourist, but thereafter Snyder doesn't keeps everybody covered up. Tough guy David Bautista assembles a team of reckless souls and plunges them into the no-man's land of Las Vegas after it has become a hot zone to retrieve \$200 million from a casino bank vault. "Army of the Dead" gets off to a sturdy start as Snyder and scribes Shay Hatten and Jay Harold explain why ghoulies galore overrun Sin City. Like toxic disposal movies where a barrel of chemical waste tumbles off a truck, sinks into a river, and spreads its contaminants both up and down stream, "Army" opens with a heavily armed military convoy escorting a 'top-secret' cargo. Ecstatic newbies having sex in their front seat crash into the flatbed military cargo truck. The impact knocks a huge locker onto the high-

way. Told too late to destroy it, the soldiers watch a military zombie smash his way out of said locker. Although they empty their automatic weapons into this resilient zombie, the fiend survives and rips them apart. Conveniently, the town nearest to outbreak is Las Vegas!

Not only does the zombie who broke out without a scratch forge his own army from scratch, but also leads his undead minions into an unsuspecting Vegas for the ultimate feast & blood buffet. The opening twenty minutes quickly establishes the premise of zombie Vegas. Miraculously, the military stacks up a towering barrier of shipping containers around Las Vegas to thwart a zombie exodus. Medical authorities pitch a camp for suspected infected and arm sentries eyeball them. Meantime, the owner of casino, E Tanaka (Hiroyuki Sanada "Mr. Holmes"), refuses to let that big bundle of \$200 million in loot languish. However, he doesn't have the luxury of forever, our President has ordered an imminent lockdown
